Fitting L.E.D Indicators to Bullets with a single warning light in the speedo or casquette

This kit comprises of 4 L.E.D Indicators and 2 resistors. The standard 2 pin flasher unit should work ok and not need replacing. One resistor should be fitted to each side of the front indicators. The resistors need to be wired in the following way:

Please note that if you are fitting L.E.D indicators to the just the rear of your Bullet, depending on the model you would not normally require resistors but may require a different flasher unit, part no 92292 which can be ordered separately.
