## 92603 Steering Damper Kit

In order to fit our steering damper kit it will be necessary to remove the original bottom yoke assembly, if this is not apparent please refer to your workshop manual. You will need Part No. ST25108 to assist in removing the fork tubes.

Once the original bottom yoke has been removed the bottom bearing cup must also be removed and refitted to the new yoke. The new yoke is now ready to be fitted by reversing the stripping procedure using the new stainless steel top nut supplied in the kit. The damper kit can now be installed as per the diagram below.
