Legshield set with brackets (non electric start Bullets + all EFI Bullets) Part No.92657

Fitting kit components:

The Leg shields are not pre-drilled, as the positioning may vary depending on what indicators are fitted. Therefore, fix the mounting brackets in place first, using the 8mm screws and nuts provided.

Once the brackets are attached, position the leg shield against the bracket so that when the handlebars are moved lock-to-lock, the indicators do not foul the top of the leg shield. Start with a 9cm gap between top of leg shield and top bracket. Hold the leg shield in place and drill the bracket holes.

The shields are attached to the large curved brackets (A) with the 6mm dome screws and 6mm nuts.

The left side fitting is done the same way.
